

COURSE OVERVIEW:

Basic Flow Training: This course will provide a basic understanding of numerous flow technologies as well as concepts applicable to equipment from different manufacturers. Following this introduction, the instructor will provide in-depth training based on the specific technology needs of the customer. This is a one day course.

Basic Flow Training – Hands-On: This course is conducted at the TechStar Functional Verification Unit – THE UNIT in Deer Park, TX. In addition to covering the same subject matter as the basic flow training, students will gain real world experience by completing hands-on flow scenarios in THE UNIT. This is a two day course.

Advanced Flow Training: This course provides in-depth training on vortex, magnetic, ultrasonic and Coriolis flow meters. The session will be a combination of classroom and hands-on training.

TOPICS COVERED:

- Differential Pressure Transmitters
- Vortex Shedding Flow Meters
- Electromagnetic Flow Meters
- Coriolis Flow Meters
- Ultrasonic Transmitters
- Thermal Dispersion Flow Meters
